

Narratives and the Perfect in East Caucasian

Samira Verhees

LingConLab meeting - 26 June 2018

Introduction

All East Caucasian languages have perfects.

Variety of different meanings

Indirect evidentiality is wide-spread (not absolute)

Introduction

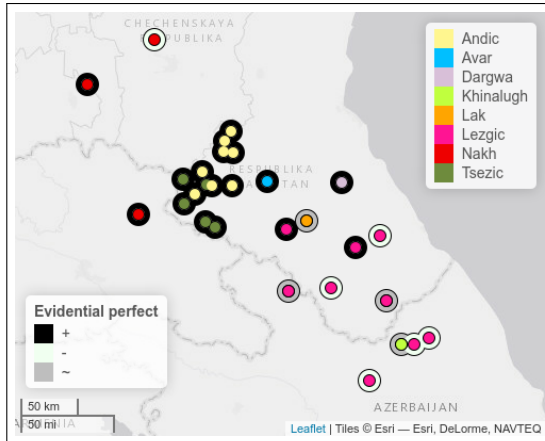

All East Caucasian languages have perfects.

Variety of different meanings

Indirect evidentiality is wide-spread (not absolute)

How to measure and systematically compare perfects and their meanings, in order to separate the more or less grammatical evidential markers from the rest?

Figure: Evidential perfects in East Caucasian

More maps [here](#).

Meanings of Perfects

Two types of meanings

- ▶ **Current Relevance (CR)** - when a resultative construction expands its usage into new territory, it develops new meanings rooted in its resultative origin.¹

¹I do not take into account perfects from other source constructions.

Meanings of Perfects

Two types of meanings

- **Current Relevance (CR)** - when a resultative construction expands its usage into new territory, it develops new meanings rooted in its resultative origin.¹

- (1) *hege -w tɬ'ixon -nij*
 DEM -M fall_asleep -CVB(PF)
 'He is sleeping.' (lit. is fallen asleep) [Andi (Andic)]

¹I do not take into account perfects from other source constructions.

Meanings of Perfects

Two types of meanings

- **Current Relevance (CR)** - when a resultative construction expands its usage into new territory, it develops new meanings rooted in its resultative origin.¹

- (1) *hege -w tɬ'ixon -nij*
 DEM -M fall_asleep -CVB(PF)
 'He is sleeping.' (lit. is fallen asleep) [Andi (Andic)]
- (2) *ifi -r hab -saʔatɬ:i -r q'ani -r q'ani -b -o ek'wa*
 we -ERG this -hour -ERG eat -MSD eat -N -PFV.CVB AUX.PRS
 'We have [just] dined.' [Bagvalal (Andic)]

¹I do not take into account perfects from other source constructions.

Meanings of Perfects

Two types of meanings

- **Implicatures** - Alternating contextually conditioned meanings with varying frequency, e.g. indirect evidentiality (via inference), mirativity (unexpectedness) and epistemic modality (speaker commitment to truth).

- (3) *?ali -r sĩr k'wa -b -o ek'wa*
Ali -ERG bear kill -N -PFV.CVB AUX.PRS
1. '(Apparently) Ali killed a bear.' - INFERENCE
 2. '(They say) Ali killed a bear.' - HEARSAY

[Bagvalal (Andic)]

In East Caucasian

Pure CR perfects | Combinations of CR and / or resultative with various more or less conventionalized implicatures.

In East Caucasian

Pure CR perfects | Combinations of CR and / or resultative with various more or less conventionalized implicatures.

Multiple meanings may co-exist, and each of the meanings from the family of implicatures may in theory be located anywhere on this scale:

In East Caucasian

Pure CR perfects | Combinations of CR and / or resultative with various more or less conventionalized implicatures.

Multiple meanings may co-exist, and each of the meanings from the family of implicatures may in theory be located anywhere on this scale:

occasional implicature → conventional implicature
→ grammatical meaning

Meanings of Perfects

How to decide whether evidentiality in particular is grammaticalized?

Different researchers, different judgments:

Meanings of Perfects

How to decide whether evidentiality in particular is grammaticalized?

Different researchers, different judgments:

NO: The form has other meanings besides it.

Meanings of Perfects

How to decide whether evidentiality in particular is grammaticalized?

Different researchers, different judgments:

NO: The form has other meanings besides it.

YES: It is the most frequent or **main** meaning.

Meanings of Perfects

How to decide whether evidentiality in particular is grammaticalized?

Different researchers, different judgments:

NO: The form has other meanings besides it.

YES: It is the most frequent or **main** meaning.

→ There is a high level of subjectivity involved

Elicitation of sentences

Problems

- ▶ Elicitation of (former) implicatures is a difficult task

Elicitation of sentences

Problems

- ▶ Elicitation of (former) implicatures is a difficult task
 - ▶ Requires concentration and imagination of the speaker
 - ▶ Target must be clear, but the researcher cannot be too literal
 - ▶ Danger of default to a neutral form
 - ▶ Speakers in the field are easily distracted

Elicitation of sentences

Problems

- ▶ Elicitation of (former) implicatures is a difficult task
 - ▶ Requires concentration and imagination of the speaker
 - ▶ Target must be clear, but the researcher cannot be too literal
 - ▶ Danger of default to a neutral form
 - ▶ Speakers in the field are easily distracted
- ▶ When unsure, speakers might fabricate explanations

Elicitation of sentences

Problems

- ▶ Elicitation of (former) implicatures is a difficult task
 - ▶ Requires concentration and imagination of the speaker
 - ▶ Target must be clear, but the researcher cannot be too literal
 - ▶ Danger of default to a neutral form
 - ▶ Speakers in the field are easily distracted
- ▶ When unsure, speakers might fabricate explanations
- ▶ Researcher is prone to cherry-pick explanations and speakers

Elicitation of sentences

Problems

- ▶ Elicitation of (former) implicatures is a difficult task
 - ▶ Requires concentration and imagination of the speaker
 - ▶ Target must be clear, but the researcher cannot be too literal
 - ▶ Danger of default to a neutral form
 - ▶ Speakers in the field are easily distracted
- ▶ When unsure, speakers might fabricate explanations
- ▶ Researcher is prone to cherry-pick explanations and speakers
- ▶ Surveys take forever to fill out and have a high risk of errors

Narrative use as a stable feature

- ▶ Indirect evidentiality is the perfect's only excuse to be very frequent in narratives
- ▶ Easily quantifiable: collect narratives - mark each main or finite verb form as P vs. not P - check correlation with evidential perspective (unwitnessed vs. witnessed)
- ▶ Spontaneous speech less sensitive to concentration / misunderstanding errors
- ▶ Any speaker can do it
- ▶ Solid feature, more or less independent of episodic evidential use; children acquire the narrative practice first and it seems harder to lose

Narrative use as a stable feature

—

- ▶ Solid feature, more or less independent of episodic evidential use; so what are we measuring? Evidentiality or narrative habits?
- ▶ Can mirative or epistemic modal perfects make up the main line of a narrative?
- ▶ Competing narrative strategies exist (e.g. neutral past + reportative particle)
- ▶ Other forms may also be used in unwitnessed narratives
- ▶ Some languages with grammaticalized evidentiality use the perfect at the beginning of a story to set the mood, then switch (e.g. Tsezic)

Perfects in narrative texts

Take a bunch of glossed texts from descriptive grammars and mark each ~~main~~/finite verb form **P vs. not P**, compare their distribution for texts about witnessed vs. unwitnessed events.

Perfected in narrative texts

Take a bunch of glossed texts from descriptive grammars and mark each ~~main~~/finite verb form **P vs. not P**, compare their distribution for texts about witnessed vs. unwitnessed events.

o: Speakers do not prefer to use perfects when they narrate events they did not witness personally.

Perfects in narrative texts

Take a bunch of glossed texts from descriptive grammars and mark each ~~main~~/finite verb form **P vs. not P**, compare their distribution for texts about witnessed vs. unwitnessed events.

o: Speakers do not prefer to use perfects when they narrate events they did not witness personally.

alternative: Narratives about events not witnessed by the speaker contain significantly more verbs inflected for perfect. → the witnessed parameter plays a role in the choice of forms.

Language sample

Bagvalal (Andic)

Features a series of indirect evidential perfect forms

Language sample

Bagvalal (Andic)

Features a series of indirect evidential perfect forms

→ Witnessed 51 sentences (3 texts) | Unwitnessed 92 sentences (3 texts)

Total 143 sentences, 242 finite verbs

Language sample

Bagvalal (Andic)

Features a series of indirect evidential perfect forms

→ Witnessed 51 sentences (3 texts) | Unwitnessed 92 sentences (3 texts)

Total 143 sentences, 242 finite verbs

Tsakhur (Lezgi)

Perfect indicates a lower degree of physical and psychological involvement on the side of the speaker, which is licensed by situations where the speaker was not present (unwitnessed) or where the situation took the speaker by surprise (mirative)

Language sample

Bagvalal (Andic)

Features a series of indirect evidential perfect forms

→ Witnessed 51 sentences (3 texts) | Unwitnessed 92 sentences (3 texts)

Total 143 sentences, 242 finite verbs

Tsakhur (Lezgif)

Perfect indicates a lower degree of physical and psychological involvement on the side of the speaker, which is licensed by situations where the speaker was not present (unwitnessed) or where the situation took the speaker by surprise (mirative)

→ Witnessed 81 sentences (4 texts) | Unwitnessed 64 sentences (2 texts)

Total 145 sentences, 184 finite verbs

Dataset

Table: Dataset (EXAMPLE)

| sentence | lexical verb | trans | gloss | form |
|----------------------|---------------|------------|-----------------|------------------|
| 1 | делать | (do) | V-IPF-PART=N=DI | participle |
| 2 | делать + быть | (do + be) | V-CONV + V.PF | pluperfect |
| comment | P | text | part | theme |
| quote | nonfinite | 13. Копова | | village anecdote |
| perspective | speaker | language | dialect | affiliation |
| indirect | [name] | Bagvalal | Kvanada | Andic |
| source | page | note | | |
| Kibrik et al. (2001) | 784 | ... | | |

P = P, not P, nonfinite (or NA)

Results

Figure: Bagvalal (full sample)

Results

Figure: Tsakhur (full sample)

Results

Figure: Bagvalal (random 50)

Results

Figure: Tsakhur (random 50)

So far, so good..

So far, so good..

Bycatch

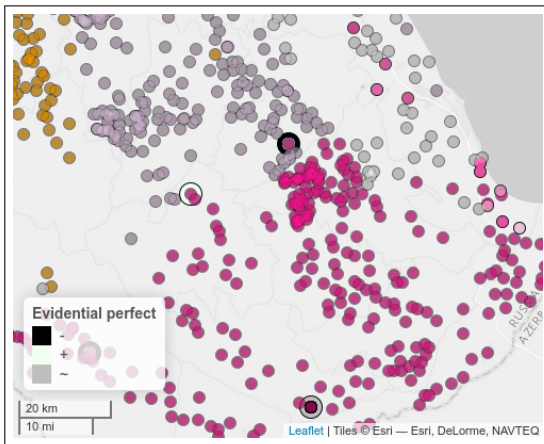

- ▶ Content of **not P** in Tsakhur more diverse and more present tense
- ▶ Use of nonfinite forms
- ▶ Aktionsart and lexical semantics of **P** verbs

Future data collection

Collect narratives from different speakers in a seeming transitional zone, i.e. personal anecdotes | retold anecdotes from others | local legends / fairy tales + mark the main verb form used in the narrative.

Future data collection

Figure: Transitional zone (Agul, Tabasaran, Lezgian, Kaitag (Dargwa))

Future data collection

Collect narratives from different speakers in a seeming transitional zone, i.e. personal anecdotes | retold anecdotes from others | local legends / fairy tales + mark the main verb form used in the narrative.

Problem: *How to annotate texts in a new language quickly and efficiently?*
